Membrane
PVC

Soil Media Supplier
ZinCo USA

This sunlit sedum balcony overlooks a family-run permaculture homestead in the foothills of southern Vermont and is directly accessible from the residence's master bedroom. Flagstones rest between patches of yellow flowering sedum, and creative natural elements complement the sophisticated rural style of the home.

Recover conveyed and installed a ZinCo green roof system but left a blank canvas for the homeowners to create their own plant palette. This sunlit deck is a beautiful example of an underutilized roof transformed into valuable living space.

"It's like being on some outrageous vacation every time we step out onto the roof, then we realize that we actually live here!" - Client/Homeowners

Top left to bottom right: Recover installed a green roof system for the homeowners to do all of their own planting on top of / A carpet of sedum sits just outside the master bedroom door / The homeowners added natural elements, including small logs and stepping stones, to add textural diversity to the roof
