

Sally's Rooftop Garden

St. Louis, MO

- TYPE
Commercial
- SIZE
3,400 sq. ft.
- COMPLETION
Spring 2018

In collaboration with Urban Harvest STL, Recover installed this rooftop garden as an event & education space for the Kranzberg Art Foundation.

Bringing community members together around art, music, and food, Sally's Rooftop Garden, and the surrounding 3,000 sq. ft. of activity space, serves as an event and education venue for the Kranzberg Art Foundation's .ZACK location, a renovated multi-use arts building in downtown St. Louis.

Recover installed **Aerated Media Modules (RAMMs)** with an integrated SMART irrigation system allowing for flexibility and mobility in design, while also maximizing vegetable production in the minimal available growing space. The garden, managed by Urban Harvest STL, supports a variety of vegetables, fruits, herbs, and edible flowers. A portion of the produce is used for Foundation events, while the rest is donated to local non-profit partners that serve communities with limited access to fresh produce and healthy food.

Top left to bottom right: Urban Harvest STL gardeners harvests colorful lettuce. /Visitors of the venue enjoy meeting other community members while learning about urban farming. / Recover conveys RAMMs onto rooftop during installation phase in spring 2018.
